OUR PRODUCT

StarCat Software

Desktop Management System – The Total Solution for Any Business

StarCat Software

StarCat is a complete solution for managing distributed computer resources from a central location. With a large variety of features and functions, StarCat automates and simplifies IT management tasks saving time and money.

Best Solution for Organizations

StarCat helps organizations address a large number of challenges. Hardware and software inventory is always up-to-date for fast and better decision making. Software piracy can be monitored and controlled. Overburdened IT staff will have improved productivity and can support more users. Endpoint security can be enhanced to better protect the enterprise from malware threats and data loss.

Strong Team and Experience

With 20 years of experience, StarCat has proven itself to be a reliable tool in over 500 organizations. StarCat has helped government and enterprise customers, domestic and international, save time and cost.

Efficient and Productive Tool

There are more than 1 million computers and laptops installed StarCat Software, including some of the leading companies in the world. StarCat has become a trusted, powerful and indispensable tool for managing computer systems.

OUR KEY FEATURES

Asset Management

Automatically collects information about the hardware, operating system, and software installed on the endpoints. Changes in inventory will be detected and notifications given. Inventory data will always be accurate and up-to-date leading to faster and better IT decision making.

Software License Management

Tracks applications installed and compares it with the licenses purchased to help organizations stay compliant with BSA licensing policies and avoid legal problems. Save money by identifying applications which can be removed or reallocated to save resources and license fees.

System Control

System administrators' productivity will be enhanced with the remote system control features. Tools include remote startup, shutdown, restart, screen capture, file/folder transfer, run Windows and DOS commands, and end user chat.

Report

Reports can be generated for both admin and IT executive functions. Over 100 reports come standard, with a report builder tool that make it easy to customize and export your reports in multiple formats.

System Policy and Security

Manage your computer's system policies and set application usage policies to enhance the organization's internal security and employee productivity.

Notification and Alert

Be notified when computers hardware or network configurations have changed; and software has been installed or uninstalled. Timely notifications allows your IT team to resolve issues before they become bigger problems.

Remote Control

Remotely control users' monitors, mouse and keyboards from your IT helpdesk. Computer problems can be fixed quickly and cost effectively, without sending people on-site.

User Profile Management

User profile management allows you to capture and store the contact details of the computer's end-user. Making it easy to find the end-user when help is needed.

OUR EDITIONS

StarCat10 Express

Suitable for SME that is looking for hardware/software inventory and remote management functions to manage up-to 300 clients.

StarCat10 Professional

Suitable for large and middle size organizations that need fully functional system management. Recommended for organizations with 200 to 1,000 clients.
